PABNA UNIVERSITY OF SCIENCE AND TECHNOLOGY
PABNA, BANGLADESH

Faculty of Engineering and Technology

DEPARTMENT OF ELECTRICAL, ELECTRONIC AND COMMUNICATION ENGINEERING (EECE)

Curriculum for B. Sc. Engineering
Session: 2025-2026

EXAMINATIONS:
2026 [1st Year 1st Semester & 2nd Semester]
2027 [2nd Year 1st Semester & 2nd Semester]
2028 [3rd Year 1st Semester & 2nd Semester]
2029 [4th Year 1st Semester & 2nd Semester]

1. Year/Level/Semester/Term-wise distribution of courses

a) 1st Year 1st Semester B Sc. Engineering Courses

Sl. No.	Course Code	Course Title	Theory		Sessional		Total Credits
			Contact Hrs/week	Credits	Contact Hrs/week	Credits	
1	EECE 1111	Electrical Circuits I	3.00	3.00			3.00
2	EECE 1112	Electrical Circuits I Sessional			3.00	1.50	1.50
3	PHY 1101	Physics	3.00	3.00			3.00
4	CE 1101	Engineering Graphics			3.00	1.50	1.50
5	HUM 1101	English	3.00	3.00			3.00
6	MATH 1101	Differential Calculus and Analytical Geometry	3.00	3.00			3.00
7	CHEM 1101	Physical and Inorganic Chemistry	3.00	3.00			3.00
8	EECE 1100	Viva-voce				0.75	0.75
Total =>			15.00	15.00	6.00	3.75	18.75

Part C: Course Description

1st Year 1st Semester

Course Code	EECE 1111	**Course Title**	Electrical Circuits I
Course Type	Core	**Prerequisite (if any)**	None
Credit Value	3	**Contact Hours / Week**	3
Year	1st Year	**Semester**	1st Semester

Rationale:

This course is important to know the fundamental knowledge, solutions techniques and different practical applications of electrical circuit both DC and AC. The purpose of this lesson is to provide students a basic grounding in AC and DC circuit, magnetic circuits and their components. Therefore, the primary goal of this introductory electrical circuit course is to instruct students in the fundamental laws, techniques, and theorems of dc electrical circuits necessary for them to formulate an effective strategy for solving problems involving the simplification of complex DC electrical circuits. In the result, this knowledge will encourage students to develop skills that are crucial to the circuit design process. After studying this course, students will be able to analyze various electrical circuits which are the fundamentals for an electrical and electronic engineer. However, through this course the potential of students' can be evaluated on AC and DC circuits and networks.

Course Content:
